

Features

- All-Call Remote Microphone
- Overrides alarm tone and automatic message
- Dead Front Cover Construction
- Paging microphone with Press To Talk Button
- "In-Use" and "Fault" LED's
- Supervised Wiring
- May be located up to 5000 feet away from Voice Evac Panel.

Description

The GVX-RM is a supervised remote microphone for use with the GVA 25(50) voice evacuation system. The microphone provides crystal-clear live voice messages over the system speakers. Ideal for use when the fire alarm panels are in an electrical room, and the annunciator and microphone are in the lobby.

The GVX-RM is perfectly suited for applications in gymnasiums, nightclubs, auditoriums, churches, and other places of assembly. Locate at control rooms, guard stations, and reception areas.

Up to 5 GVX-RM Panels may be connected to a single GVX-SC Supervisory Card. This provides supervision of the wires to the GVX-RM and they may be located up to 5000 feet away.

The GVX-RM is housed in a surface or semi-flush mounted backbox with a hinged locking door, and features dead front construction, a microphone with a "Press-to-Talk" button, and discreet LEDs to display "In-Use" and "Fault" status.

Technical Specifications

Model Number	GVX-RM
Backbox Dimensions	8 x 10 x 3" w-h-d
Color	Charcoal Grey - std; Red - optional

Operation

In the normal (Standby) mode, announcements can be made from any remote microphone at any time. Simply keying any remote microphone will allow a manual paging message to be broadcast in an "ALL-CALL" mode.

If multiple remote microphones are used, and two or more are simultaneously keyed, then the first microphone keyed will have paging priority. The paging microphone in the master will always have priority over any and all remote microphones. The GVX-RM can be wired for general public address, and will be automatically disabled on alarm. In the alarm mode, the keying of any remote microphone will interrupt any pre-recorded tone or message, and will allow manual voice evacuation messages to take priority. When the microphone Press-to-Talk key is released, the automatic pre-recorded voice evacuation message (typically tone and voice) will be replayed from the start.

Typical Application of Remote Microphone
